

ANTI-BARK DEVICE FOR DOGS

Anti-Bark Device water spray is a system built to interrupt the inconvenient barking of dogs, in an absolutely natural and painless way for the animal. This in fact is based on the principle that a simple spray of water is enough, at times when the barking becomes annoying, to induce the animal to take refuge in silence in the dog house.

The anti-barking system can be programmed to suit your needs, such as operating only at night, adjusting the sensitivity or the duration of the spray, the activation only for sustained barking, etc 100% made in Italy

DATA SHEET

Materials

The kit consists of the instruction manual, solenoid valve, 220V power supply (120V on request) and microphone.

Indication

Electric cables, water pipes and sprayers not included to allow you to build a system to suit your needs. Solenoid valve connection 1 inch (2.54 cm).
